

# Stay cool by saving energy.

This summer is projected to be a hot one in New Jersey! Here are our favorite quick and easy tips to help your business save energy and money this season.

## LIGHTS OUT

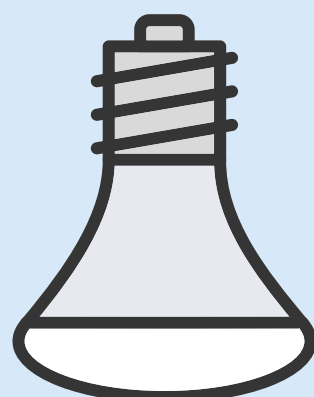

Turn off the lights to lower your energy use and cool your building – taking advantage of summer daylight is free and the most efficient!

Turning off non-essential appliances can also help conserve energy and reduce internal heat gain.

## LED THE WAY

Who hasn't sweated under fluorescent lighting? LED lights produce little to no heat output and reduce energy usage, compared to older lighting.

By switching to LEDs, you're also helping to cool your space!

## PLAY WITH TEMPS

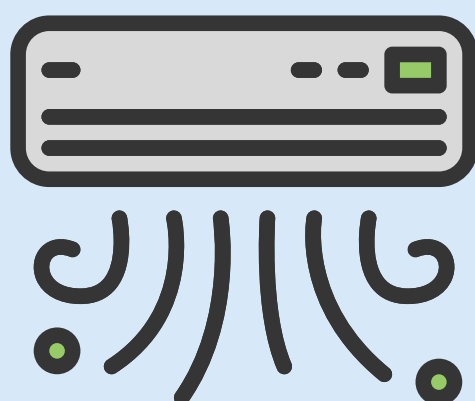

Work with your employees on finding the most optimal temperature for everyone, setting the temperature as high as it's comfortably possible.

The smaller the difference between the indoor and outdoor temperatures, the lower your overall cooling bill will be.

## CLEAN YOUR A/C

Change your filters. Clean your condenser coils. Get routine maintenance done on your A/C units!

We often come across A/C equipment that is relatively new and fully operational, yet they cost their owners WAY more than necessary to cool the building due to improper maintenance.

## GO LOW FLOW

Water usage increases in the summer, so consider installing low-flow aerators to all of your facility's faucets.

With it being so hot outside, employees should be washing their hands and dishes with cold water, which saves money too!
