

Energy solutions to help your business save

C&I PRESCRIPTIVE AND CUSTOM PROGRAMS

For many businesses, curbing energy use can reduce operational costs. Whether you own or manage an office building, restaurant, apartment complex, or large facility, you know that outdated equipment can hurt profits and potentially pose a safety hazard. Installing energy-efficient equipment and controls can not only save you energy and money but improve safety too.

Some of the incentivized equipment and controls that businesses like yours can take advantage of include:

- Commercial kitchen equipment
- Heating and cooling equipment
- LED lighting and controls
- Specialized controls
- Variable frequency drives (VFDs)

Find a complete list of eligible equipment and incentives at atlanticcityelectric.com/Incentives.

Save on some of the most sought-after upgrades including:

- HVAC (A/C and heat pumps) and controls
up to \$125 per ton
- Electric griddles
\$300 per unit
- Multiple tank commercial dishwashers
up to \$1,500 per unit
- Commercial combination oven/steamer
\$1,000 per unit
- ENERGY STAR® commercial glass door freezers
up to \$300 per unit
- ENERGY STAR heat pump electric water heaters
up to \$1,000 per unit

Prescriptive Program

No matter what business you are in, we have prescriptive solutions that can help you start saving energy and money right away. Financial incentives are available for heating and cooling, HVAC controls, lighting, commercial kitchen equipment, and more. But savings are just the beginning. We also provide technical expertise to help you identify energy efficiency opportunities that are right for your operations and budget. And we have resources to connect you with a Trade Ally in your area to complete your projects.

Custom Program

Some manufacturers, industrial companies, and data and distribution centers have complex energy needs that cannot be met completely by prescriptive solutions. For those businesses, Atlantic City Electric offers custom solutions. Tailored to meet specific needs, custom projects are typically optimization solutions with performance-based incentives using the lesser of \$0.16 per kWh saved annually (first year) or 50% of the eligible project cost. Custom projects include:

- Compressed air
- Refrigeration
- Data center equipment/servers
- HVAC/chillers
- HVAC controls
- Motors/VFDs
- Building improvements
- Process improvements
- Agricultural lighting/process
- Custom lighting
